

BOWMAN

SQUIRELL - 300

- Exciting and fun!
- Throws rabbit clays
- 300 clay capacity
- Re-cocking time of 1.5 seconds
- Chute included in the price
- Hard wired circuitry and with a 40 AMP fuse
- Heavy duty motor and gear box
- Motor Driven Carousel
- Height Platform and ramp optional
-

BOWMAN

Bowman traps was established in 1966, making manual clay traps that are still being used today across homes and shooting grounds all over the world. We have over 50 years expertise in building machines that throw consistent and reliable targets.

Bowman traps are made at our factory in East Markham Nottinghamshire. We make our components onsite to ensure the quality of Bowman traps remains the highest it possibly can. Having the skill and ability to design and manufacture gives our traps the edge!

We pride ourselves on producing a high-quality product that has been designed and manufactured in the UK. We have built our brand to be synonymous with quality; therefore, we confidently offer 3-year warranty on ALL of our automatic traps!

The main frame of our traps in the Supermatch Range are made from a high tensile aluminium casting. The strong foundations of our traps ensure that vibrations are absorbed, meaning clay breakages are reduced.

Simple but hugely effective our carousels have domed rod ends. These help with the smooth and quick loading of clays. Because we use steel tubing, our carousels and overall trap weights are lighter meaning easier movement and lifting. Our carousels are plated to prevent rusting.

The entire Bowman range has been designed so adjustment of elevation, tilt and spring tension are done with levers. No spanners are required, and adjustments can be made in seconds!

No Tools. Its just makes sesne!

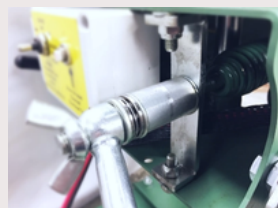

Our wiring is very user friendly and simple to understand. Your motor will be protected by a blade fuse or thermal overload switch.

Our multi-clay traps are revolutionising clay pigeon shooting. You get more versatility and the ability to change targets effortlessly with a cost-effective solution. Different clays sizes behave differently in the air providing a more real experience for simulated game.

We use our own specially designed female duraplug for the best connection possible to your trap release system. They brass connectors have been coated with nickel plating for longevity and are fitted with a spring clip for a positive connection. Our plug is compatible with all 3 pin type duraplugs.

adjusting tension on a powerful spring can be tough, seeking to improve our customer experience we added an M12 thrust washer to make this task easier. The improvement was so successful we have added it to most of the traps in our range! Through listening to our customers and analysing our products we are continually striving for excellence.

Springs for every situation Spare Parts ordering online Low Cost spare parts reduces operating costs over the lifetime of the machine with most parts being DIY fitment costs are reduced even further

We design and manufacture our traps at our factory in Nottinghamshire. We fabricate our own barrows, bases and make many of the trap components ourselves. This gives us the ability to undertake bespoke work for our customers who are looking for something a little different. Check out some of our bespoke designs in our [photo gallery](#).
